

SENS SIGHT is a technology and innovation company specialized in development and licensing of advanced industrial vision systems for industrial markets.

Founded in January 2017 and based in Meylan, France, SENS SIGHT is expert in imaging technologies for several markets, including : automotive, industrial maintenance, security, home appliances, smart building, and smart cities

Our custom-made solutions cover three different aspects of industrial imaging :

- The right equipment: through our in-depth knowledge of the different products of imaging suppliers, we select the most suitable equipment for your project by studying its cost performance ratio. We then produce the appropriate electronic cards and boxes.
- The right optimization: we improve in a software way the characteristics of the vision system to offer you a quality image at a reduced cost, guaranteeing a high added value compared to your competitors. For example: to make it possible to distinguish details in a noisy image.
- The right data: finally, we imagine intelligent solutions and generate the data you need in the operating conditions that are yours (from the easiest to the most difficult).

The products displayed in our press kit are some demonstrators showing what we can achieve . They are not for sale at the date on which the current document was written.

Our turn-key solutions have seduced several major actors of the industry, as VALEO or AIRBUS.

Further informations :

- Our team is made of 5 dedicated collaborators.
- SENS SIGHT went at the CES 2018 of Las Vegas, our technology was showcased both on VALEO booth and on our own booth.
